

Name: Chirag Khatri  
Roll No:1902076  
Batch: C21

## Experiment 2

**Aim:** Application of agile process model on the project(JIRA).

**Theory:** Jira is a suite of agile work management solutions that powers collaboration across all teams from concept to customer, empowering you to do the best work of your life, together. Jira offers several products and deployment options that are purpose-built for Software, IT, Business, Ops teams, and more. Read on to see which is right for you.

In our project we made Kanban board on JIRA software. A kanban board is an agile project management tool designed to help visualize work, limit work-in-progress, and maximize efficiency (or flow). It can help both agile and DevOps teams establish order in their daily work. Kanban boards use cards, columns, and continuous improvement to help technology and service teams commit to the right amount of work, and get it done!

Daily Expense Tracker System's to-do task ,done task, and task in progress to plan and track our project on Kanban board
